

**Schools, Sports Halls and
Educational Establishments**

Independent Heating & Cooling

As specialist designers and installers of commercial climate control systems, Independent Heating & Cooling has acquired a wealth of experience in the specialist requirements of schools, colleges and sports establishments. Whether the brief is for heating, cooling or ventilation, our past record stands as our greatest recommendation to those searching for suitable contractors in this specialist field.

Each building presents individual demands and difficulties – particularly schools and colleges, which are frequently situated in listed or environmentally sensitive locations.

In addition, awareness of the demands of a working building, particularly in areas where young people are present and where health and safety problems are unique to the environment, is paramount. These are all conditions in which we are well used to working.

From initial design – where technical requirements of the system are considered alongside the more aesthetic

matter of sympathetically blending the equipment into the physical environment, right through to commissioning the completed system – we are there to ensure a smooth path. Should you contract IHC, we will appoint a Project Manager who will be your primary contact. He will liaise with you at all times should the need arise.

So, whether you need heating and cooling for a brand new construction or a Grade I listed building we have the experience – and the track record – to assure you that we are the best people for the job.

IHC

The range of buildings in which we have installed systems covers almost 800 years of history!

Battle Abbey School in Sussex (built on the site of William the Conqueror's victory over King Harold in 1066) dates back to the thirteenth century Abbot's House, with more 'modern' parts of the school dating from the sixteenth century. Such an important heritage site is obviously a challenge, and when we were contracted to fit a new boiler, many sensitive issues had to be considered.

In contrast, we have worked closely with building contractors on new builds, most recently during construction of a school's theatre/dance studio, where a new, state-of-the-art facility was required. Working with the architect, we devised a custom designed heating and cooling system, addressing the problems of heat and ventilation generated by powerful lighting and enthusiastic audiences.

Whatever the problem – we have the solution
